Water Tank

- Ten foot cooling tank with air knife attached.
- Cooling Tank holds the sizing fixture that forms the vinyl sheet into finished product.
- It is really two tanks in one machine.
- A sump tank holds all the water needed for cooling, and an upper tank holds all the tooling.
- A pump moves the water from the sump and into the upper tank to cool the material then the water flows back into the sump where it is cooled.
- Powder coated frame, stainless steel reservoirs and plumbing make the machine extremely durable
